FOREWORD

Statistical data that reflect the socio-economic and demographic conditions of the residents of a country are useful for designing and preparation of development plans and for monitoring and evaluation of the impact of the implementation of the development plans. These statistical data include population size, age, sex, fertility, mortality, migration, literacy and education, marital status, occupation, industry, housing stocks and conditions, ...etc. In order to fill the gap for these Socio-economic and demographic data need, Ethiopia conducted its second National Population and Housing Census in October, 1994.

The 1994 Population and Housing Census of Ethiopia was conducted under the auspices of the Population and Housing Census Commission that was set up under Proclamation No. 32/1992. The Commission was chaired by the Prime Minister and the members of the commission were drawn from various relevant ministries. The Central Statistical Authority served as the Office of the Commission (Secretariat). Hence the processing, evaluation and analyses of the data collected in this census as well as its dissemination are the responsibilities of this office. As stated above the census was conducted in October 1994 and the resulting data are processed and evaluated. Thus, the Office of the Population and Housing Census Commission is pleased to present the census report "The 1994 Population and Housing Census of Ethiopia: Results for Tigray Region, Volume I- Statistical Report" for users. Another report which deals with the detailed analysis of the results of the 1994 Population and Housing Census data for Tigray Region will also be produced soon.

The 1994 Population and Housing Census was a huge nation wide operation which could not be undertaken by a single organization. Thus, full cooperation and assistance of government and non-government organizations, external donor agencies and the public in general was obtained. A number of preparatory activities were also

carried-out before the census enumeration was begun. Among the major census preparatory activities was the conduct of the Population and Housing Census Map Work. In the census map work the peasant associations in rural areas and the urban dwellers associations in urban areas were sub-divided into enumeration areas with 150-200 housing units in urban areas and 150-200 households in rural areas. About 5-6 contiguous enumeration areas were formed into one supervision area. In this exercise enumeration area and supervision area maps were also prepared. In the census map work operation a total of 49,978 enumeration areas and 9,845 supervision areas were constructed in the settled rural areas and 8,724 enumeration areas and 1,575 supervision areas in the urban areas of the country. In Tigray Region a total of 3369 enumeration areas and 677 supervision areas were delineated in the rural areas, and 677 enumeration areas and 131 supervision areas in the urban areas.

During the census enumeration one enumerator was given the map of one enumeration area and was responsible to record all persons and housing units in that enumeration area. One supervisor was later assigned to a supervision area and was responsible for the quality of the information collected in that area.

The Office of the Population and Housing Census Commission would like to thank all government and non-government agencies who participated in the organization of the census, the supervision of the field work, the data collection, and the respondents who participated in providing the necessary information. The government of Ethiopia has given huge financial and unreserved administrative support in undertaking the 1994 National Population and Housing Census from its inception till the dissemination of the results. This indicates the commitment and high priority offered by the government for socio-economic and demographic data collection, processing, evaluation and dissemination of the results to users.

The Office would also like to take this opportunity to express its many thanks to the United Nations Population Fund (UNFPA) to its generous financial assistance and technical support in conducting the census. Moreover, thanks are due to United States Agency for International Development (USAID) for its financial and technical assistance for the census. Further thanks are due to the United Nations Development Program (UNDP) and to the Swedish International Development Authority (SIDA) for their financial assistance. The office hopes that the data presented in this report will be found useful by all data users.

Abdulahi Hasen(Ph.D.)

Member
and
Secretary,
Central Census Commission

CHAPTER VII -- POPULATION PROJECTIONS

TABLE 7.1	Reported population size of Tigray region by urban and rural areas October 11, 1994 census.....	344
TABLE 7.2	Population projection of Tigray region by rural-urban, five years age group and sex, 1995 - 2000	345

CHAPTER I

INTRODUCTION

This chapter presents an over view of the content of the census report " The 1994 Population and Housing Census of Ethiopia: Results for Tigray Region, Volume I- Statistical Report". It presents the major statistical tables that are essential to planners, administrators, researchers and other data users. The analytical report of the results of the census for Tigray Region will be presented in a separate report, and will deal with indepth analyses of the results.

Tigray Region consists of four administrative zones, thirty five weredas, and 74 towns. The rural part of the region has 1008 farmers association areas, while the urban part has 140 kebeles in the 74 towns.

The 1994 Population and Housing Census was the second national population and housing census ever to be conducted in the country. The first population and housing census that included only the urban part of Tigray Region was conducted in May 1984 (CSA, 1991). For the region as a whole, the 1994 Population and Housing Census is the only major source of data pertaining to population and housing. The Second Population and Housing Census of Ethiopia was conducted beginning 11 October, 1994 and was completed in most areas within the following ten days. Eleventh of October, 1994 was used as the census day. The questionnaires used for the census were prepared in Amharic. English translations of the questionnaires used in the census are presented at the end of the report. The types of questionnaires used were:

- i) Short Questionnaire (Appendix I)
- ii) Long Urban Questionnaire (Appendix II)
- iii) Long Rural Questionnaire (Appendix III)

The content of the short questionnaire was similar in urban and rural areas. The questionnaires were filled-in by enumerators who went from one household to the next. All members of the household were recorded on the same questionnaire. The short and the long questionnaires differed on the number of variables collected. The short questionnaire collected basic data on population such as population sizes, sex, age, language, ethnic group, religion, and marital status. In addition to these, the long questionnaire included data on disability, education, economic activity, migration, fertility, mortality, and housing stocks and conditions.

The type of questionnaire administered to each household was determined by using a systematic sampling selection procedure. During the three days before the census day all households, and housing units were listed in a separate form designed for the purpose. This list was used to identify the type of questionnaire that was to be administered to the households. One out of five households was selected to be interviewed using the long questionnaire, while the other four were interviewed using the short questionnaire. Residents of hotels, hostels and other collective quarters were always interviewed using the long questionnaire. Short questionnaire was also administered on the homeless persons.

Some of the information presented in this report which referred to population sizes, sex and age composition, language, ethnic, religious and marital distributions were collected from all persons covered in the census. However, some other information presented in this report was collected from only a sample of the population. This refers to disability, education, economic activity, migration, fertility, mortality, and housing stocks and conditions. Even though the above information was collected from a sample of the population, statistical weights were applied to the information collected in order to let them represent the entire population. This means that the numbers presented in the tables

that refer to education, economic activity,... etc. represent the entire population of Tigray Region and not only the sample population.

The fact that the information was collected from a sample of households and not from the entire households does not make the information less reliable. In fact this process increases the quality of the information collected by reducing the work load that would have been faced if all households were covered using the long questionnaires. The reduction of the work load improves the quality of the data because it is expected to facilitate a closer supervision during field work, enable better data coding and editing, and enable the timely processing of the data collected. The census was conducted by enumerators who went from house to house filling in the questionnaires designed for the purpose. Homeless persons were enumerated in the place where they were spending the night.

This report contains seven chapters. The first chapter serves as an introduction to the report. Chapter II presents the population sizes, sex, age, language, ethnic, religious, and marital status distributions of the population. It also provides the disability condition in the city. Chapter III presents the educational characteristics of the population. Chapter IV deals with the economic characteristics in the region. Chapter V deals with migration, fertility and mortality conditions. Chapter VI deals on the housing stocks and conditions in Tigray Region. Chapter VII presents population projection up to the year 2000.

Because of the use of sampling in the collection of some of the information in the census, slight discrepancies between the various tables may be observed. Tables that deal with population size, sex, age, language, ethnic group, religion and marital status refer to the entire population. Tables that deal with disability, education, economic activity, migration, fertility, mortality exclude the homeless. Since the homeless population is very small

compared to the population of Tigray Region, the discrepancies are very small. Homeless persons were enumerated using only the short questionnaire because the enumeration took place at night at the place where they were sleeping, and it was not convenient to apply long questionnaires in these situations. The Homeless were not included in the application of the statistical weights.

Some of the tables presented in this report are produced for the zones, weredas, towns, rural areas, urban areas, kefetegnas, kebeles and farmers association areas of Tigray Region. The tables presented here were selected from a long list of tables that have already been produced for Tigray Region. The forthcoming analytical report for the 1994 Population and Housing Census data of Tigray Region will also present some of these tables. The analytical report will concentrate more on providing indepth analysis rather than providing detailed tabulations. Analysis of the results of the census are expected to continue even after the production of the analytical report.

CHAPTER II

POPULATION SIZE AND DEMOGRAPHIC CHARACTERISTICS

This chapter presents data on population size for Tigray Region at zone, wereda, urban kebeles and rural farmers' associations levels classified into rural and urban areas. Also presented are population sizes by age, sex, type of residence, household size, ethnic group, language, religion, relationship to head of the household, marital status and disability. The chapter consists of various tables which are self-explanatory. However, short definitions of some important terms and concepts used in the chapter are provided.

The first table of this chapter (Table 2.1) presents population size of Tigray Region by sex classified into urban and rural areas. Table 2.2 and 2.3 provide the population size of towns and urban kebeles, respectively, while Table 2.4 shows the population size of farmers' associations in the rural parts of the region. According to the 1994 Census, Tigray Region's population was found to be 3,136,267 of which 1,542,165 were males and 1,594,102 were females. The population sizes refer to the de jure population size of Tigray Region as of 11 October, 1994. De jure population comprises of all the people who "belong" to a given area at a given time by virtue of usual residence (Shryock et al., 1973). In the census a person is said to be a usual resident of a household (and hence an area) if he/she has been residing in the area continuously for at least six months before the census day or intends to reside in the area for six months or longer. Thus, visitors are not included with the usual population. Homeless persons were enumerated in the place where they were spending the night. The 1994 Census includes foreign nationals who were residing in the region. On the other hand all Ethiopians living abroad were not counted.

Tables 2.5A - 2.5C classify population size by broad age group and type of residence and Table 2.6 shows population size of zones by sex and type of residence. Type of residence is categorized into two major groups, namely, conventional and non-conventional. Respondents who live in the same housing unit and have common cooking arrangements (eat their food together) are said to be residing in conventional households. The non-conventional population in turn is sub-divided into residents of collective quarters (hotel/hostel and other collective quarters) and the homeless. A collective quarter is a housing unit, a building, or a compound in which a number of unrelated persons reside together and share common facilities e.g. boarding schools, prisons, hotels hostels, ... etc. Homeless persons refer to individuals without any fixed residence.

The distribution of the number of members per household for the population living in conventional households of zones is given in Table 2.7. A household often consists of the head, the spouse, their children and some other persons residing in the household. A person is considered to be a member of a household if he has the same cooking arrangement with the other members.

The population size of Tigray Region by single years of age and sex is presented in Table 2.8, while Table 2.9 and 2.10, respectively, provide the five year age group and sex distribution of the population for weredas and towns. During the census, age of respondents was registered in completed years. Enumerators used several probing questions to get exact ages from respondents who did not know their exact ages.

Ethnic identity of a person is traced through his/her national or tribal origin. To assist the enumerators in recording the information, detailed list of the ethnic groups in the country, obtained from The Institute of Nationalities Study, was provided in the census enumerators' manual. In this report ethnic groups are listed down in alphabetical order, except where indentation is used

to present related ethnic groups next to one another. For example the Kembata, Alaba and Kebena are related ethnic groups. For this reason all these ethnic groups are presented next to one another. To indicate that these are related ethnic groups, the names Alaba and Kebena appear indented in the list below the name Kembata. The selection regarding which ethnic group will appear indented in the table does not imply that one ethnic group is dominant over the others. All the ethnic groups are treated independently and separate figures are presented for each.

The size of each ethnic group residing in Tigray Region and its zones is presented in detail in Table 2.11. The ethnic group distribution of weredas and towns are provided in Table 2.12 and 2.13, respectively. However in Tables 2.12 and 2.13 only the five major ethnic groups within a wereda/town are presented separately, while the rest are grouped together and presented as "others". This was done to keep the table to a manageable size.

In the 1994 Census mother tongue is defined as the language used by the child for communication with his family members or guardians during childhood. Whereas second language is additional language used by the respondent. If the respondent uses more than one additional language, the one that is used more frequently is recorded. Similar to the previous table, indentation is used to present related language groups one after another. Table 2.14 presents the detail distribution of all mother tongues spoken in the region. In Tables 2.15 and 2.16, however, only the largest five mother tongues spoken in weredas and towns respectively are presented. The remaining mother tongues spoken are grouped together and labeled as others. Table 2.17 provides all the second languages spoken in Tigray Region.

Religion is presented under four major groups; namely, Christian, Muslim, Others and Traditional. Christian is further subdivided into Orthodox, Protestant and Catholic. Orthodox Christianity includes the Kibat and Tsega while Seven Day

Adventist, Pentecost, Lutheran, Baptist, Anglican, Presbyterian, Meserete Kirstos, Mulu Wengel, Kale Hiywot...etc. are presented as Protestants. Hindus, Jews, Behais, Johovas, Atheists etc. fall under the "others" category. Tables 2.18A - 2.18C present the religious distribution of the population by age group, while Table 2.19 and 2.20 show religious groups and their respective size of population for weredas and towns, respectively.

The 1994 census has also collected information on members of the household and their relationship to the head. The head of the household is any member of the household who is recognized as a head by the members. In a polygamous marriage where the wives have separated households the husband is considered to be the head of the household of the first wife. The other wives or other members (eg. elder son) is considered to be the head of their respective households. The data on relationship to the heads of conventional households is presented in Tables 2.21A - 2.21C.

Marital status of the population aged ten years and over by age group and sex is presented in Table 2.22A - 2.22C. Marital status is presented in four major groups; namely, single, married, divorced, and widowed. A person who had never been married is considered to be single; married persons include couples who are living together bonded by any kind of marital engagement at the time of the census (Traditional, Church, or Municipality); separated couples are also considered to be married unless they had dissolved their marriage agreement. Any body who had been married but whose marriage was dissolved before the census day is categorized as divorced. A person who has not married again after the death of a spouse is categorized as widowed.

Table 2.23 present disability status and type of disability by broad age groups and sex for the region. Table 2.24 provides disability status and type of disability by sex for each zone. Note that figures in these tables exclude the homeless. In the census a disabled person was defined as one who, due to physical or mental

injuries, could not fully perform activities that other healthy persons could do. This represents decrease or loss of ability to discharge various social or economic functions. Disability is presented under ten major groups, namely; i) totally blind ii) partially blind (one whose eyes could only see partially or one who is blind on one eye); iii) hearing problems (totally deaf or partially deaf); iv) hearing and speaking problems; v) leg problems (lame, amputated or crippled); vi) hand/arm problems; vii) leprosy; viii) mental problems (epilepsy, madness, mental retardation, melancholia...etc); ix) other types of disability (different from what is specified above); and x) multiple disability (with two or more physical defects mentioned above).

CHAPTER III

EDUCATIONAL CHARACTERISTICS

This chapter presents data on educational characteristics of the population of Tigray Region . The data was collected from members of the sampled household. Two questions on education were included in the census questionnaire to measure school attendance and educational attainment. The information was collected from persons who were covered using the long questionnaire. However, the information has been weighted and all the figures in this chapter refer to the entire population of Tigray Region.

Every person aged five years and over in a sampled household was asked to report his/her educational status. The three alternative answers given were (1) attending school during the census year, (2) attended school in the past and left during the census year and (3) never attended. The resulting data is given on Table 3.1A, 3.1B and 3.1C. Similarly, data on school attendance for zones classified by urban and rural areas is given in Table 3.2.

Those who were attending school during the census year were further asked to indicate the grade in which they were attending. The distribution of the region's population classified by age and grade attending is presented on Table 3.3A, 3.3B and 3.3C. Population of zones classified by grade are given in Table 3.4. In order to measure the proportion of students out of the school age population it is essential to compute gross and net enrollment ratios.

Gross enrollment ratio in primary education is defined as the ratio of students in primary education divided by total number of children aged 7-12 years (multiplied by 100 percent). Gross enrollment ratio in junior secondary education is the number of students in junior secondary education divided by total children aged 13-14 years (multiplied by 100 percent). Gross enrollment ratio in senior secondary education is the number of students in

senior secondary education divided by total children aged 15-18 years (multiplied by 100 percent). The gross enrollment ratios for primary, junior and senior secondary levels for weredas classified by urban and rural areas are presented in Table 3.5. Enrollment ratios that exceed 100 indicate enrollment of over-aged children in each level. Since this ratio does not consider the age distribution of the enrolled population the net enrollment ratio was calculated.

Net enrollment ratio in primary education is defined as students in primary education aged 7-12 years divided by total children aged 7-12 years (multiplied by 100 percent). Net enrollment ratio in junior secondary education is defined as students in junior secondary education aged 13-14 years divided by total children aged 13-14 years (multiplied by 100 percent). Net enrollment ratio in senior secondary education is the number of students in senior secondary education aged 15-18 years divided by total children aged 15-18 years (multiplied by 100 percent). The net enrollment ratios for weredas are presented in Table 3.5.

Data on educational attainment is also given in this chapter. Those who were attending school during the census day and attended in the past and left school prior to the census day were asked to state whether they were literate or not. If literate, respondents were further enquired to report the highest grade completed in the formal education system. Following the recommendation of the United Nations that states age of 10 years as the minimum age for compiling and analyzing data on educational attainment, Table 3.6A - 3.6C and Table 3.7 present data on educational attainment for the population aged 10 years and over for the region and weredas, respectively. Similarly, data on educational attainment for the towns is given in Table 3.8.

The report in general and this chapter in particular refers to formal education only. "A formal education is defined as education in which students are enrolled or registered regardless of the mode of teaching used. It includes both 'regular school and university

education' and 'adult education'. All regular schools and university education is essentially formal. Adult education, however, can be formal and non-formal. The 1994 population and housing census covered only the formal component of the adult education and all regular and university education.

Regular and University education is used to describe the system that provides a 'ladder' by which children and young people may progress from primary schools through universities (although many drop out on the way). Adult education is used to describe out-of-school education, which provides education for people who are not in the regular school and university system and who are generally fifteen or older (although in some circumstances, younger students are accommodated along with their older colleagues)" (United Nations, 1976).

CHAPTER IV
ECONOMIC ACTIVITY STATUS

In the 1994 population and housing census, information on economic activity status was collected for all persons aged ten years and over using the long questionnaire. The long questionnaire was administered only on selected households. The selection was done on the basis of systematic sampling and covered one fifth of the total households. However, statistical weights were later applied which makes the figures presented in this chapter to refer to the entire population. Information on economic activity collected in the census was:

- a) whether engaged in productive work during the reference period.
- b) reason for not being engaged in productive work during the reference period (for those who were not so engaged).
- c) major type of occupation.
- d) major product or service of the establishment or industry.
- e) employment status in the main activity.
- f) number of days worked during the last seven days for those engaged in productive work (for urban areas only).

The approaches used in the collection of the above information in urban and rural areas were different. The current status approach was employed in the urban areas, while the usual status approach was used in the rural areas. The main difference between the two approaches is in the length of the reference period. The current status approach is based on a short reference period, which in this case is the seven days before the census day. On the other hand, the usual status approach has a long reference period, that is, the twelve months before the census day.

In urban areas all persons aged ten years and over who were productively engaged for at least one day during the seven days reference period were classified as economically active. In rural

areas all persons aged ten years and over were classified to be participating in a productive activity if they were engaged in the production of economic goods and services during most of the twelve months prior to the census day. For those engaged in agricultural activities, persons who were engaged in agricultural and related work during most of the main agricultural season were classified to be economically active.

Economic or productive activity in the census was defined in terms of production of goods and services following the concepts presented in the United Nations System of National Accounts (SNA) production boundary (ILO, 1990a). Economic activity is defined as work which involves the production of goods or services for sell or exchange for other commodities including:- production and processing of primary products (agriculture, hunting, fishing, forestry and logging, and mining and quarrying) for own consumption, own account construction and fixed asset formation (expected life use of one year or more) for own use. Such activities could be performed for an individual, family or private enterprise, government establishment or public organization. The remuneration may be on daily, monthly, yearly or contract basis. However the activities of apprentices are considered as productive activity. On the other hand, unpaid household chores such as preparing food, cleaning the house, taking care of children or collecting firewood are not considered to be productive activities. In addition unpaid community and volunteer services and prostitution are classified as non-economic activities.

Economically Active and Non-active Population

The economically active population comprises all persons aged ten years and over who were employed and unemployed. The employed population consists of those who were engaged in productive activity for at least one day during the seven days prior to the census day for urban areas and most of the twelve months prior to the census day for rural areas. Persons who had regular jobs but

did not work during the reference period because of poor health, social reason, seasonality of work, annual leave or due to temporary closure of establishment were included as employed persons. The unemployed population consists of those who were not working during the reference period and were actively looking for work or were discouraged job seekers, that is, those who were not actively looking for work but were ready and willing to take up a job if one was available. A person who is looking for work but was engaged in a productive activity during the reference period is recorded as economically active and not as an unemployed person. The number of economically active and the non-active population by five year age group, sex and region is presented in Tables 4.1A - 4.1C. The tables also present activity rates which are defined as the percentage of the economically active over the total of the active plus the non-active population. Table 4.2 provides economic activity status and activity rate of zones by sex and urban/rural residence, while Table 4.3 shows economic activity status and activity rate of towns by sex.

The reason for not being engaged in an economic activity (for those who were not so engaged) is presented in Tables 4.4A - 4.4C. The reasons are classified as: students, home makers, disabled, too young, pensioners, prostitutes and "others". However students, pensioners, ... etc. are considered economically active if they were productively engaged during the reference period. The distribution of the unemployed population by five year age group, sex and region is presented in Tables 4.5A - 4.5C. Table 4.6 provides unemployed population of zones by sex and urban/rural residence, while Table 4.7 shows unemployed population of towns by sex. Some of the towns in the region are very small, and because of the use of sampling in the census some bias was introduced in the estimation of rates of unemployment. Thus, high rates of unemployment was recorded for some towns while some towns recorded low rates.

Type of Activity

Employed persons were asked about the type of occupation, and major product or industrial group of the establishment in which they were engaged during the reference period and the status of their employment. This information was also collected from unemployed persons who had previous work experience. The information collected from these persons referred to the job they held before they became unemployed. The information on type of activity was not collected from unemployed persons with no previous work experience. Therefore, analysis of economically active population by occupation, major product or type of service of their establishment and status will be based on a number fewer than the total economically active persons by the number of unemployed persons who never had any work experience.

A national occupation and industrial classification code list was prepared for the census. The list prepared closely followed the International Standard Classifications of Occupation (ILO, 1990b) and International Standard Industrial Classification (UN, 1990) but took into account the prevailing national socio-economic conditions. These classifications were used for coding the responses on occupation and the type of industrial group of the establishment.

The distribution of the status in employment of the economically active population by five year age group and sex is presented in Tables 4.9A - 4.9C. The distribution of the economically active population by the major occupational group by five year age groups and sex appears in Tables 4.10A - 4.10C. The Sub-major and the minor occupational groups by sex and urban/rural residence appear in Table 4.11. Tables 4.12A - 4.12C present the distribution of the major industrial divisions classified by five year age groups and sex. The Sub-major and the minor industrial groups are presented by sex and urban/rural residence in Table 4.13. Table 4.14 presents the distribution of number of days worked

for the employed population by sex and zone. This table also presents the mean number of days worked by employed persons. The data presented in the table is limited to urban areas only because the number of days worked was not collected in rural areas.

CHAPTER V

MIGRATION, FERTILITY, AND MORTALITY

The previous chapters in this report dealt with the description of the characteristics of the population. This chapter deals with the changes (dynamics) that are occurring in the population. These are migration, fertility and mortality. The first section of the chapter deals with migration and it will be followed by fertility and mortality.

A. MIGRATION

Information on migration of a population is of direct interest to planning and implementing agencies as well as academic institutions, because migration has a direct effect on the geographic distribution of the population. Moreover, migration has an interaction with other demographic forces as well as other aspects of social and economic changes. In recognition of the importance of this variable as one of the components of population change, data on migration was collected in the 1994 Population and Housing Census of Ethiopia.

In the 1994 census, two migration related questions were employed. These were: "Length of continuous residence" and "Place of previous residence". The former question provides information on the timing of migration while the later provides information on area of origin.

The "length of residence" of each person refers to the number of years the person has been continuously residing in a town or rural part of the wereda of enumeration. The length of stay was recorded in completed years.

In the census, information on length of residence was collected differently in the urban and rural parts of the country. The question asked in the urban areas referred to the

number of years the person has been continuously residing in the town. In the rural areas, the question referred to the number of years the person has been continuously residing in the rural parts of the wereda of enumeration.

Thus, in the urban areas a person who was born in a given town and has been continuously residing there is considered as a non-migrant. However, if the person was born in another town or any rural part of the country, then, he/she is considered as a migrant. Similarly, a person who was born in the town of enumeration but at one time or another resided in a different town or a rural area and has returned to the town of enumeration is considered as a migrant (return migrant).

In the rural areas, a person who was born in a rural area of wereda of enumeration and has been continuously residing there is considered as a non-migrant. However, if the person was born in a rural part of another wereda or any town, then, he/she is considered as a migrant. Similarly, a person who was born in the rural part of the wereda of enumeration but at one time or another resided in a rural part of a different wereda or any town and has returned to the rural part of the wereda of enumeration, is considered as a migrant (return migrant).

The "area of previous residence" refers to the area where the migrant has been residing before he/she migrated to the area of enumeration. In the census, the "area of previous residence" of migrants was recorded as "rural" or "urban" if the person has migrated from rural or urban areas, respectively. This enables the classification of all migrants as migrants from rural or urban areas.

This section presents the main findings based on the two migration related questions discussed above for Tigray region. Tables 5.1A - 5.1C present population by age group, sex, migration status, area of previous residence of migrants and area of enumeration. Tables 5.2A - 5.2B present population by sex, migration status, area of previous residence of migrants and area of enumeration (zones, urban, rural, and towns). Tables 5.3A -

5.3C present the length of residence of the in-migrants (classified by age and sex of in-migrants) in area of enumeration. Finally, Tables 5.4A - 5.4B present in-migrants by sex, length of residence in the area of enumeration (zones, urban, rural and town). The length of residence classifications used were less than one year, one year, two years, three years, four years, 5-6 years, 7-9 years and 10 years and above.

B. FERTILITY

This Section presents the fertility level of the population of Tigray Region. In the 1994 Population and Housing Census Questionnaire information was collected on both current and retrospective fertility from every woman aged 10 years and over.

Data on current fertility was obtained by asking, "Did you have a live birth during the last twelve months prior to the census day?." Information on retrospective fertility was obtained by asking about the total number of children ever born alive, number of children living at home, number of children living elsewhere, and number who had died up to the census day.

Generally, data on current and retrospective fertility collected in censuses of developing countries are not usually free from error. Data on total number of children ever born may also be distorted due to recall-lapse and socio-cultural factors, above all, because of the extended family system in the country, the women are likely to include relatives with their own. Again, the various social practices associated with birth of small babies, especially those births that end in early death are likely to have been omitted from reporting. Another source of error in the reported number of children could be the inclusion of still births. These probable errors should be borne in mind while interpreting reported fertility measures presented in this section.

Reported Current Fertility

Based on the question asked about number of births given in the year preceding the census day, reported fertility measures were computed and presented in Table 5.5A and 5.5B. The measures include Crude Birth Rate (CBR), General Fertility Rate (GFR) and Total Fertility Rate (TFR).

The Crude Birth Rate refers to the total number of births occurring in a given year per 1000 mid-year population. The General Fertility Rate is defined as the number of births

occurring in a given year per 1000 women in the reproductive ages (i.e. women aged 15-49).

The other fertility parameter which takes into account the age structure of the population is what is known as Total Fertility Rate (TFR). Total Fertility Rate refers to the number of children a woman is likely to reproduce at the end of her reproductive period given the current age-schedule of fertility rate. Reported total fertility rate for Tigray Region is about 5.4 children per women. The corresponding figure in urban and rural areas of Tigray Region were 4.2 and 5.6 respectively.

The above mentioned fertility measures indicate only the level of fertility. Tables 5.6A and 5.6B give the number of women and births by age and the corresponding age specific fertility rate-ASFR (the ratio of births to women in each age group). The age specific fertility rates reveal that about 64 percent of the total births given in the year preceding the census day are born by women in the age group 20-34. The women in the early twenties (20-24) and thirties (30-34) and late twenties (25-29) are the most fertile. The observed pattern of fertility by age group holds true for both urban and rural areas.

The reported level of age specific fertility rates for each zone and each town with population size of 10,000 and above persons are presented in Tables 5.6A and 5.6B respectively. The analysis on current fertility excludes women who did not state number of births they had during the 12 months before the census day. Hence the number of women in the various age groups in this table may not be consistent with other figures in the report.

Cumulative Fertility

The other fertility index of interest is the mean number of children ever born presented in Table 5.7 the total, rural and urban areas of the region. Summary measure on mean number of children ever born for each zone and each urban center that has 10,000 and above persons is also presented in Table 5.9B. Completed fertility is imputed from data on number of children

ever born by women aged 45-49 years. Comparison of the mean number of children ever born at age group 45-49 and TFR, revealed a difference of one child for total, rural and urban areas. This little difference between the two fertility measures suggest that the general pattern of fertility in Tigray remained unchanged over the years.

The fertility measures reported in this section are all reported levels. No attempt has been made to make adjustments to the levels of fertility. Detailed analysis of the level of fertility will be made in the analytical report that will be forth- coming soon.

C. MORTALITY

For the analysis of mortality only one type of information was collected in the 1994 Population and Housing Census. The question was addressed to women in their reproductive ages and referred to the total number of children ever born and the number surviving. To get the data, all women aged 10 years and over were asked the total number of sons and daughters they ever gave birth to, the total number living at home, and the total number living elsewhere and the total number that died. This information was then utilized to provide estimates of infant and under-five mortality and expectation of life at birth. These mortality indicators are defined as follows:

Infant mortality ($1q_0$): the probability of dying between birth and age one per 1000 live births in a given year.

Under-five mortality ($5q_0$): the probability of dying between birth and age five per 1000 live births.

Expectation of life at birth (e_0): refers to the average number of years a new born baby is expected to live if he/she is exposed throughout its life to the prevailing pattern of age specific death rates.

In order to estimate these mortality indices the Trussell Variant of the Brass Indirect Technique (UN, 1983) was employed and the West Family of the Coale and Demeny Model Life Tables were selected as the standard pattern of mortality. But the reliability of indirect estimates based on children ever born and surviving data highly depend on the quality of reporting of children ever born, children dead and age of women. Thus, any bias in the reporting of these data might lead to over or under estimation of mortality. In the census the proportion of women in the reproductive age (15-49 years) who did not report their parity and number of children dead were not very high, being 1.3 percent for the Tigray Region. For this reason, these women were

totally discarded from the analysis. Furthermore, it should be noted that since the estimates based on reports of women aged 20-34 have been proven to be relatively accurate than the estimates of younger and older women, infant and child mortality rates provided were an average of the three age groups, namely 20-24, 25-29 and 30-34.

Infant and under-five mortality estimates along with the corresponding life expectancies at birth for Tigray Region and its rural and urban sub-divisions are presented in Table 5.8A. Also similar estimates are presented in Table 5.8B for urban centers that have population sizes of 10,000 and above persons. The data indicate an infant mortality rate of 123 per thousand live births and under five mortality rate of 181 for the Region. The expectation of life at birth for Tigray Region was found to be 49.4 years for both sexes, 48.2 years for males and 51.1 years for females. The data in Table 5.9A and Table 5.9B provide the distribution of number of children ever born and number surviving, by age group of women as reported during the census. These tables were the basis on which the estimated levels of mortality were derived. More detailed analysis of the levels of mortality will be presented in the indepth Census Analytical Report of Tigray Region that will be forthcoming.

CHAPTER VI
HOUSING CHARACTERISTICS AND CONDITIONS

The 1994 population and Housing Census included housing questions for urban and rural areas, and information on housing characteristics and conditions were collected for residential and partly residential housing units. The data collected show the housing stock, the quality of the housing unit, the housing facilities and amenities, and the status of tenure and monthly rent of housing units. In this chapter the data on housing units of Tigray Region are presented in Tables 6.1 through 6.24.

In the census a housing unit is defined as a separate and independent place of abode either intended for habitation or not intended for habitation but was occupied as a living quarter by a household at the time of the census. A housing unit may at the time of the census be occupied by one or more households or may be used partly for living and partly for establishment. Different housing questions were employed in the rural and urban parts of Tigray Region. The data on housing collected in the urban areas was relatively very detailed (Appendix II) while those collected in the rural areas was of limited nature (Appendix III). Thus, during the presentation of the results, some tables refer to urban areas only, while some others may refer to both urban and rural areas. A few tables refer to rural areas only.

During the census buildings in which housing units were located were identified as either non-storied or multi storied. The quality of the housing unit is determined by its structure, number of rooms, and density of occupation. Thus, the information collected for each housing unit includes its type of building, type of construction material of walls, roofs, floors, and ceilings which indicated the physical quality of a housing unit. The data on number of rooms per occupied housing unit and number of persons living per room was also collected. Here it must be noted that the averages were calculated for conventional population and

conventional housing units. In the census a room was defined as a space enclosed by walls reaching from the floor to the ceiling or roof at least to a height of two meters and having an area of at least four square meters (i.e. a size large enough to hold a bed for an adult). Except for bath rooms, toilets and passage ways other rooms found in the housing unit were considered as rooms.

In urban areas information on housing facilities and amenities such as bathing, toilet, kitchen, source of water supply, source of power for lighting, type of fuel used for cooking, and availability of radio, television and telephone sets were collected during the census. On the other hand in rural areas information on type of fuel used for cooking, availability of toilet, source of water supply, information on whether there was a separate room in the housing unit that was used mainly as kitchen were collected. A kitchen is defined in the census as a room primarily used for cooking meals but due to lack of adequate rooms or space in the housing unit, some persons or some livestock may also spend the night in the kitchen. In urban areas information on whether a housing unit has traditional or modern type of kitchen was also collected. A modern kitchen is defined as a room that has piped water and sink.

In this chapter data on the status of tenure and monthly rent of housing units is also presented. Tenure refers to the arrangements under which the household occupied its living quarters. A housing unit is said to be owner occupied if it is owned by the occupant household and it is free from rent. A housing unit is considered as rented if the household living in it pays rent to kebele office or to Agency for the Administration of Rented Housing or to the private individuals or to other organizations. There are also housing units occupied by households paying difference in rent. These are households that own another housing unit elsewhere that is rented for a lesser rent compared to the rent of the housing unit the household is occupying.

CHAPTER VII
POPULATION PROJECTION

Population projection gives information on the size, structure and characteristics of the population in the future. The resulting projected population figures can be used for drawing development plans and for policy making. This chapter provides the projected population size of Tigray Region by rural-urban, sex, and five years age group for period from 1995-2000.

Methodology:

There are two main categories of methods for population projection: (a) procedures for projecting the population considering mortality, fertility and migration by age and sex (cohort component method); and (b) procedures for projecting the population using mathematical functions. The former technique is usually applicable to a longer time period projection under different variants, i.e., low, medium and high variants. In this report, a simple mathematical function (exponential) is used to project the population up to the year 2000.

The population projection is made separately for rural and urban areas by applying the national estimated annual average growth rates for rural and urban areas (2.23 percent for rural and 4.11 percent for urban areas). The projected population size of rural and urban areas were made using an exponent method of projection. The projected population size of rural and urban areas were split into males and females by applying and keeping constant the sex ratios of rural and urban population of Tigray Region obtained in the 1994 census. Then, the projected population of urban and rural areas by sex were added up to give the total projected population size of Tigray Region.

Assessment of age structure of the population:

Information on age of the population collected in the census is often subjected to age mis-reporting. This is because some people, do not know their true age and others do not report their age accurately. The indices and graphs of the age structure of the population have indicated that, there is some distortion of the reported age pattern of the population. This distortion on the reported age pattern of the population may be caused by age misreporting and migration. Despite some distortion on the age pattern, the reported age structure of the rural-urban population of Tigray Region obtained from the 1994 census were used as a base year population. The reported age structure of the rural, urban areas of Tigray Region obtained from the 1994 census are given on Table 7.1.

Assumptions:

The projection presented in this chapter is made under the assumption that the annual average population growth rates of rural and urban areas for the nation observed between 1984-1994 which are 2.23 percent and 4.11 percent respectively will remain constant during the projection period. Then, these observed growth rates are applied for projecting the rural and urban population of Tigray Region for each year between 1995-2000. The reported age distribution obtained in rural and urban areas during 1994 are assumed to remain constant up to the year 2000. The assumption that age distribution will remain constant is some what dubious because changes in fertility and mortality will have an effect on age distribution. This assumptions may be revised when detailed population projections are made in the forthcoming census analytical report of the region.

Projection Results:

Based on the above assumptions, the projected population

results of Tigray Region and rural-urban breakdowns by sex, five years age group up to the year 2000 is given in Table 7.2. Figures in the tables refer to mid-year population i.e., July first of the indicated years.

This projection is made for a limited number of years and under very broad assumptions. This was made to provide figures that will be useful for institutions or individuals who would like to use the projected figures, till detailed projections under various assumptions and for longer periods can be made. These detailed projections will be presented in the census analytical report of the region that will be forthcoming.

1994 ETHIOPIAN POPULATION AND HOUSING CENSUS LONG QUESTIONNAIRE -RURAL

LOCALITY NAME _____

SECTION 1 - AREA IDENTIFICATION

1. KILLIL	2. ZONE	3. WEREDA	4. TOWN	5. KEFTEDA	6. SUPERVISION AREA	7. FARMERS' ASSOCIATION	8. ENUMERATION AREA

SECTION 2 - TYPE OF RESIDENCE AND HOUSING UNIT PARTICULARS

9. TYPE OF RESIDENCE	10. HOUSING UNIT SERIAL NUMBER	11. HOUSE No./ SUB No.	12. HOUSEHOLD SERIAL NUMBER
1= CONVENTIONAL HOUSEHOLD 2= HOTEL/HOSTEL 3= OTHER COLLECTIVE QUARTERS 4= NOMADS 5= HOMELESS			

SECTION 3 - PARTICULARS OF HOUSEHOLD MEMBERS

SERIAL NUMBER OF HOUSEHOLD MEMBERS	ASK FOR EVERY MEMBER OF THE HOUSEHOLD										FIVE YEAR AND OVER				ASK FOR MEMBERS AGED 10 YEARS AND OVER					ASK FOR WOMEN AGED 10 YEARS AND OVER					
	NAME OF USUAL HOUSEHOLD MEMBERS	RESIDENCE STATUS	RELATIONSHIP TO THE HEAD OF THE HOUSEHOLD	SEX	AGE	RELIGION	LANGUAGE	ETHNIC GROUP	MIGRATION STATUS	DISABILITY STATUS	EDUCATIONAL STATUS	ECONOMIC STATUS	PARTIAL STATUS	TOTAL NUMBER OF CHILDREN EVER BORN ALIVE			BIRTHS LAST 12 MONTHS								
														MALE	FEMALE	DEAD									
13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31	32	33	34	35	36	37	38
0.1																									
0.2																									
0.3																									
0.4																									
0.5																									
0.6																									
0.7																									
0.8																									
0.9																									
1.0																									

SECTION 4 - DETAILED INFORMATION ON HOUSING UNIT

39	40	41	42	43	44	45	46	47	48	49	50	
WELL HOUSING UNIT INFORMATION BE COLLECTED?	WHAT IS THE TYPE OF ROOFING UNIT?	WHAT IS THE MAJOR MATERIAL USED FOR THE CONSTRUCTION OF THE WALL?	WHAT IS THE MAJOR MATERIAL USED FOR THE CONSTRUCTION OF THE ROOF?	WHERE DO THE RESIDENTS OF THE HOUSING UNIT GET THEIR DRINKING WATER?	WHAT IS THE NUMBER OF ROOMS IN THE HOUSING UNIT?	WHAT TYPE OF FLOOR DOES THE HOUSING UNIT HAVE?	DO DOMESTIC ANIMALS SPEND THE NIGHT IN THE ROOMS WHERE PEOPLE SLEEP?	DOES THE HOUSING UNIT HAVE A SEPARATE TOILET DOES THE NIGHT IN THE HOUSING UNIT?	WHAT TYPE OF FUEL IS MOSTLY USED FOR COOKING IN THE HOUSING UNIT?	IS THERE A RADIO OR TV SET IN THE HOUSING UNIT?	NAME OF ENUMERATOR AND SUPERVISOR	
1= YES 2= NO	1= MUD/CLAY 2= BRICK/ROOF 3= STONE AND MUD 4= STONE AND CEMENT 5= BRICKS 6= OTHER/SPECIFY	1= MUD AND MUD 2= MUD AND BRICK 3= BRICK/ROOF 4= STONE AND MUD 5= STONE AND CEMENT 6= BRICKS 7= OTHER/SPECIFY	1= CORRUGATED IRON 2= UNPAINTED WELLS/SPRING 3= UNPAINTED WELLS/SPRING 4= OTHER/LAKE/POND	1= LAP 2= PROTECTED WELLS/SPRING 3= UNPROTECTED WELLS/SPRING 4= OTHER/LAKE/POND	1= 1-10 2= 11-20 3= 21-30 4= 31-40 5= 41-50 6= 51-60 7= 61-70 8= 71-80 9= 81-90 10= 91-100 11= 101-110 12= 111-120 13= 121-130 14= 131-140 15= 141-150 16= 151-160 17= 161-170 18= 171-180 19= 181-190 20= 191-200 21= 201-210 22= 211-220 23= 221-230 24= 231-240 25= 241-250 26= 251-260 27= 261-270 28= 271-280 29= 281-290 30= 291-300 31= 301-310 32= 311-320 33= 321-330 34= 331-340 35= 341-350 36= 351-360 37= 361-370 38= 371-380 39= 381-390 40= 391-400 41= 401-410 42= 411-420 43= 421-430 44= 431-440 45= 441-450 46= 451-460 47= 461-470 48= 471-480 49= 481-490 50= 491-500 51= 501-510 52= 511-520 53= 521-530 54= 531-540 55= 541-550 56= 551-560 57= 561-570 58= 571-580 59= 581-590 60= 591-600 61= 601-610 62= 611-620 63= 621-630 64= 631-640 65= 641-650 66= 651-660 67= 661-670 68= 671-680 69= 681-690 70= 691-700 71= 701-710 72= 711-720 73= 721-730 74= 731-740 75= 741-750 76= 751-760 77= 761-770 78= 771-780 79= 781-790 80= 791-800 81= 801-810 82= 811-820 83= 821-830 84= 831-840 85= 841-850 86= 851-860 87= 861-870 88= 871-880 89= 881-890 90= 891-900 91= 901-910 92= 911-920 93= 921-930 94= 931-940 95= 941-950 96= 951-960 97= 961-970 98= 971-980 99= 981-990 100= 991-1000	1= YES 2= NO	1= YES 2= NO	1= YES 2= NO	1= YES 2= NO	1= YES 2= NO	1= YES 2= NO	1= YES 2= NO
